Post-Treatment Instructions for Customized Scar Laser Procedure

- You may feel a burning sensation for about 1–2 hours after the procedure. Cleansing and makeup can be done gently without irritation starting the next day.
- Depending on individual skin type, small acne-like bumps may temporarily appear. This is a normal reaction after the procedure, but if irritation is severe or you feel uncomfortable, please contact us.
- For 2 weeks, please avoid exfoliation, sauna, steam bath, strenuous exercise, swimming, alcohol consumption, and the use of skincare products that may cause irritation.
- Swelling and redness may occur in the treated area. Do not intentionally scratch or peel off any scabs formed after the procedure.
- Skin regeneration will continue for 2–4 weeks after the procedure. Please pay special attention to moisturizing and skin regeneration care.
- To prevent pigmentation, apply sunscreen every 3–4 hours.
- If redness, swelling persists longer than 1 week, or if you experience severe itching, blisters, or any unusual symptoms, please contact the clinic immediately for appropriate care.
- If a Duoderm dressing has been applied, fluid discharge may occur. Please replace it once a day and continue use for about one week.
